

Enterprise Recon 2.10 Now Available

Introducing discovery scanning support for Confluence and more

We're excited to let you know that the latest version of Enterprise Recon is [now available](#) to customers. This release introduces scanning for Confluence on-premises deployments and remediation capabilities for OneDrive Business and SharePoint Online.

Key Features of Enterprise Recon 2.10

The key features and benefits introduced in Enterprise Recon 2.10 include:

- **Discovery scanning for Confluence:** Scanning is now available for Confluence on-premises deployments, enabling businesses to scan all or specific spaces, blog posts and pages, including comments and attachments.
- **Remediation support for OneDrive Business and SharePoint Online:** The ability to mask, delete or quarantine sensitive data is now available for OneDrive Business and SharePoint Online, further enhancing data management capabilities for these environments.
- **Scanning and remediation for the latest macOS versions:** Enterprise Recon 2.10 now supports data discovery and remediation of macOS Ventura 13.0 and macOS Sonoma 14.0 workstations and servers.
- **New and improved data types:** Two new data types are included in this release for Singaporean bank account numbers and driver's license numbers. Further updates include the addition of Australia R Series passport numbers, and support for common formats of Minnesota driver's license numbers.
- **New and improved user interface for Investigate and Match Inspector.**
