

Card Recon 3.0.2 Now Available

Introducing discovery scanning support for new platforms

We're excited to let you know that the latest version of Card Recon is [now available](#) to customers. This release introduces scanning and remediation support for new platforms, and new and improved data types.

Key Features and Benefits

The key features and benefits introduced in Card Recon 3.0.2 include:

- **Discovery scanning and remediation for new platforms:** Windows 11 and Windows Server 2022 environments are now supported for both scanning and remediation. Discovery scanning is now available for Oracle Linux, macOS Monterey, macOS Ventura and macOS Sonoma environments.
- **Improved data types:** Discover Global Network cardholder data types have been updated to identify 14-19-digit primary account numbers (PANs) for all supported BIN ranges. This includes China Union Pay, Diners Club, Discovery and JCB payment cards.
- **Security enhancements:** Various behind-the-scenes updates for increased application security.

Customers can download Card Recon 3.0.2 now from the [Ground Labs Services Portal](#). More information about the changes, features and benefits introduced is provided in the [Card Recon 3.0.2 documentation](#).
